HIGH-CYCLE VEHICLE SALLY PORT DOORS FOR CORRECTIONAL FACILITIES

"As those of us in corrections know, vehicle doors in our correctional facilities need to be opened 100 to 200 times a day. We installed two of them in our new Inverness facility. After two years we have found them to perform beyond our wildest dreams."

*John Schweitzer, Chief Deputy, Corrections Branch,
Multnomah County Sheriff's Office.*

Hydraulic four fold vehicle access doors offer powerful advantages for correctional facilities.

Electric Power Door's hydraulic four fold doors are engineered to meet your security, functional and aesthetic needs with a variety of options including:

- Automated controls
- Custom designed panels: louvers, bars, security mesh, flat sheeting, etc.
- Bullet resistant panels
- Vision lights

Ideal doors for high-use, high-security areas:

- Vehicle sally ports
- Secure parking
- Courtyard and prison gates

Two to three million cycles

- Doors last more than 10 times that of conventional doors
- Quick open and closing time - doors operate at two feet per second
- Hydraulic controls can be remotely located for security and enhanced serviceability

Low maintenance, durable, and abuse resistant

- Hinged door panels - no chains, spring counterbalances, garage door rollers or side guides to maintain.
- Minimum 2 inch thick doors are constructed of structural steel and/or heavy 14-gauge sheeting.
- Wind and weather resistant doors operate in any conditions. Handles high wind loads, insulated for extreme temperatures which reduces icing.

High energy efficiency

- Energy tested - results available
- Heavily insulated
- Weatherstripped for tight seal

Electric Power Door sales engineers and representatives can assist you with specifications and quotations at no charge.
