# HIGH-CYCLE VEHICLE ACCESS DOORS DESIGNED FOR SECURITY

# Hydraulic four fold vehicle access doors offer numerous advantages for security parking facilities.

HYDRAULIC FOUR FOLD DOORS

CUSTOM SIZED DOORS CAN BE USED ON SINGLE OR DOUBLE TRAFFIC LANES

Electric Power Door's hydraulic four fold doors are engineered to meet your security, functional and aesthetic needs with a variety of options including:

- Can be equipped with automated controls for
  - Loop detectors
  - Card readers
  - Photo eyes
  - Barrier arm gates
- Aesthetically custom designed panels with louvers, grills, or decorative panel sheeting to complement their surroundings
- Security mesh, flat sheeting, etc.
- Vision lights

## Ideal doors for high-use – two to three million cycles

- Doors last more than 10 times that of conventional doors with minimum maintenance
- Quick open and closing time - doors operate at two feet per second
- Hydraulic controls can be remotely located for security and enhanced serviceability

## Low maintenance, durable, and abuse resistant

- Hinged door panels - no chains, spring counterbalances, garage door rollers or side guides to maintain.
- Minimum 2-inch thick standard doors are constructed of structural steel and heavy 14-gauge sheeting.
- Wind and weather resistant doors operate in almost any condition. Doors handle high wind loads, are insulated for extreme temperatures, and reduce icing.

## High energy efficiency

- Air infiltration tested - results available
- Heavily insulated
- Weatherstripped for tight seal
