VERTICAL  
LIFT  
DOORS

## Durable vertical lift doors for continuous operation in abrasive environments

Vertical lift doors, unlike other overhead sectional and roll-up doors, are constructed with structural steel framing and heavy 14-gauge steel sheeting (minimum 4-inch panel thickness) that holds up to the kind of abuse you would expect to find in the mining and steel industries.

### Ideal doors for truck shops and heavy equipment maintenance facilities.

- Unlimited door sizes — fit any opening
- Last more than 10 times that of conventional doors.
- Can be designed to include pedestrian man-doors and vision lights
- Low maintenance requirements
- Can be opened and closed manually in a power failure
- No floor guides for smooth traffic flow
- Doors are supported by the floor slab, not the building

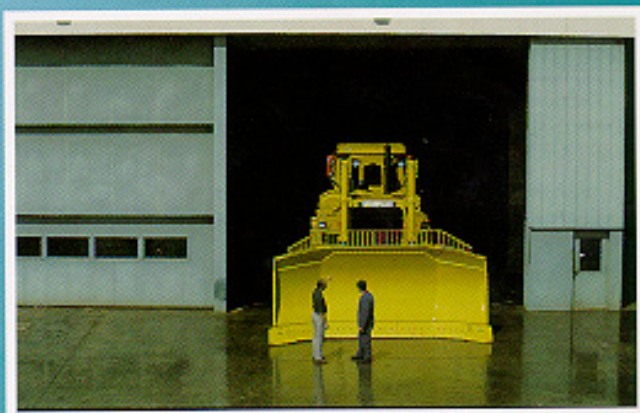

### Durable

- Every door is customized to each opening for a perfect fit. Interior or exterior mounting is available.
- Long lasting counter-weight system
- Abuse resistant - constructed of structural steel and heavy 14-gauge sheeting. In most instances they will still operate after being hit.
- Anti-friction guide rollers on door panels ensure easy operation even under high wind loads

### Energy advantages

- Air infiltration tested doors are customized to fit tight to openings — holds down costs of heating and cooling. Test results are available by contacting an EPD sales engineer.
- Wind and weather resistant doors operate in the toughest conditions. Doors handle high wind loads and can be insulated to eliminate icing in extreme cold temperatures.

For more than 70 years EPD's Vertical Lift Doors have been outperforming all other doors in the mining and steel industry.

HEAVY EQUIPMENT MOVES IN AND OUT OF BUILDINGS EASILY WITH VERTICAL LIFT DOORS.

Electric Power Door sales engineers and representatives can assist you with specifications and quotations at no charge.
