TRANSPORTATION DOORS

DESIGNED TO LAST A LIFETIME

ADVANTAGES OF TRANSPORTATION DOORS BY EPD

Ideal for Bus and Rail Facilities

Doors stand up to the constant cycling required of bus and rail transportation facilities. There are no floor guides for the doors, so rail and bus traffic moves through effortlessly.

The hydraulic four fold door has an area at the center opening that is perfect to notch for the catenary to go through. A common problem for roll-up doors, the four fold door perfectly folds around the catenary.

Low Maintenance

The long-lasting EPD operating system keeps the door operating under the most severe conditions. Vertical Lift Doors are weight counterbalanced to assure a long operating life. Guide rollers on the door panels and a guided counterweight box have proven to be dependable.

The four fold doors have a long-lasting hydraulic operating system and durable hinged door panels. There are no high-maintenance chains, spring counterbalances, garage door rollers, and side guides

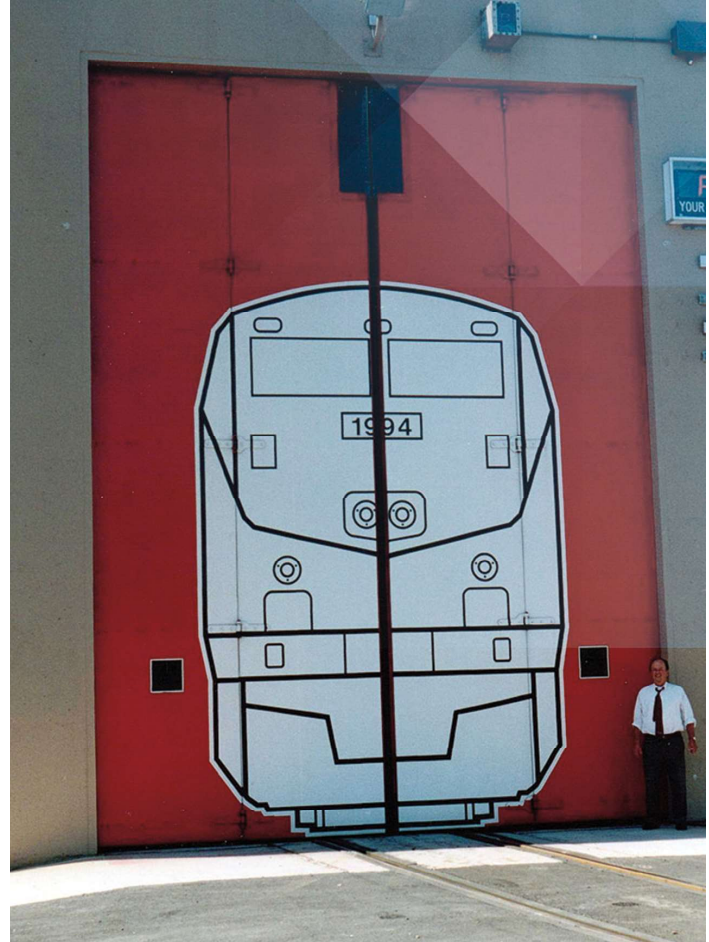

Overall operating costs are less than other types of doors over the life of the door.

Perfect Fit and Operation

Every door is customized to the transportation building and opening. Vertical lift doors can be interior or exterior mounted to adapt a door to virtually any building. Any automation system can be installed to operate the doors.

The four fold doors quickly open and close at the speed of two feet per second. You also never lose the use of the door. Both vertical lift and four fold doors can be operated manually in the event of an emergency situation.

High Energy Efficiency

The doors have tight seals and can be insulated according to climate needs. The insulation and fast operation of the door helps keep constant air temperatures in the building. Doors have been energy tested, and reports are available. The doors will keep heating and cooling costs down.

Weather/Abuse Resistant

This is a large transportation door that works in any weather condition. Because of the insulation, the doors do not ice up. You can depend on the doors to operate, even under heavy wind loads. The abuse resistant doors will still operate after being hit in most instances.

Security

Often a problem with large doors on remote transportation facilities, Vertical Lift and Four Fold Doors can be provided with various security features.

The standard structural steel framing and heavy 14-gauge steel sheeting hold up to most security needs, and bullet resistant doors are available. Photo eyes, a central control system, and many other security options are also available.
